

# Things to consider when you order sound absorbers with your own prints

---

## Photography

Check that you are sending the best possible resolution of your images. In order to print out properly, the resolution needs to be approx. 50 dpi (dots per inch). As a rule of thumb, you can assume that an image with fewer than 1,000 x 800 pixels will not be sufficient. We can accept your original images in all file formats (for example, JPEG, TIFF, PDF, PNG).

If you will be using a cropped image, consider that in this case the image will shift over the sides on the sound absorber, which means that approx. 70 mm on each side will be lost from the front view. So always send uncropped original images, preferably together with the cropped image so we can see how you imagine the end result.

## Logos / vector images

If the image you want to print is a logo, it is good to send vector-based files as the original. The file formats .AI, .EPS and .PDF can be used.

## Send the image via Sprend.com

Go to the website [www.sprend.com](http://www.sprend.com) and upload your image file. Add all the necessary information regarding size of the sound absorber etc. in the message field. Send your order with the image to [sales@frapett.se](mailto:sales@frapett.se)

**If you have any questions, you are always welcome to contact us so we can assist.**
